Human IFN-γ Detection Kit

Cat. No. KITF-042 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Interferon is a class of glycoproteins, a cytokine produced by monocytes and lymphocytes, with antiviral, inhibit cell proliferation, immune regulation and anti-tumor effects. IFN- γ, the only member of type II IFN, is mainly secreted by T lymphocytes, natural killer cells, and antigen-presenting cells, which can regulate the body"s immune response in many ways, improve the activity of immune cells, and inhibit tumor cell division. The "human interferon- γ (Human IFN- γ) quantitative detection kit" uses double antibody sandwich ELISA method, which can accurately, specifically and conveniently detect the content of hIFN- γ in various biological products.
