

Co-Immunoprecipitation (Co-IP) Kit (For Animal)

Cat. No. KITMI-IP01A **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Co-Immunoprecipitation is a method for studying protein-protein interactions, which use of the specific interaction between antigen and antibody as the basis for precipitation. The antibody binds to the corresponding protein in the lysate and they are then incubated with ProteinA/G coupled Sepharose or Magnetic Beads, the antigen-antibody complexes are collected by centrifugation or with the help of magnetic racks. ProteinA/G magnetic bead-antibody - target protein complexes are obtained, and the antigen and antibody is dissociated under the action of high temperature and reducing agent. The supernatant, which includes antibody, target protein and a small amount of miscellaneous protein, is collected and then analyzed by Western Blot (WB) or mass spectrometry (MS) to identify the proteins.
Size	6 tests
Storage	Antibodies and protease inhibitors need to be stored at -20°C and the rest at 4°C
Applications	Protein interaction
Notes	6 tests mean 6 times of single group (1 group of IP or 1 group of IgG) immunoprecipitation experiments. The following procedure includes 1 group of IgG and 1 group of IP, which consumes 2 test reagents
Shipping	On Ice
Kit Components	Lysis buffer: 9mL ProteinA/G Magnetic Beads: 200uL

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Incubation buffer: 4.5mL
Wash buffer: 20mL
Elution buffer: 700uL
Protease inhibitor (100X): 35uL
Normal Rabbit IgG (1mg/mL): 30uL
Normal Mouse IgG (1mg/mL): 30uL

**Materials Required
but Not Supplied**

PBS, 6X protein loading buffer, magnetic rack and other reagent consumables
