

Recombinant Human KLK4 Protein, His-tagged

Cat. No. KLK4-078H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human KLK4 protein with His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	254
Description	<p>Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. In some tissues its expression is hormonally regulated. The expression pattern of a similar mouse protein in murine developing teeth supports a role for the protein in the degradation of enamel proteins. Several transcript variants encoding different proteins have been found for this gene.</p>
