

Recombinant Full Length Human KRT19 Protein, His-tagged

Cat. No. KRT19-7239H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human KRT19 Protein with His tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-400 aa
Description	The protein encoded by this gene is a member of the keratin family. The keratins are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that envelopes the developing epidermis. The type I cytokeratins are clustered in a region of chromosome 17q12-q21.
