### SPECIFICATION

|                         |   |
|-------------------------|---|
| <b>Product Overview</b> | Recombinant human CK-8 (Gln90-Gln236) fused with His tag was expressed in E. coli.  |
| <b>Species</b>          | Human   |
| <b>Source</b>           | E.coli  |
| <b>ProteinLength</b>    | Gln90-Gln236  |
| <b>Description</b>      | Keratin8 (KRT8) is the major component of the intermediate filament cytoskeleton and predominantly expressed in simple epithelial tissues. Aberrant expression of KRT8 is associated with multiple tumor progression and metastasis. KRT8 overexpression in renal cancer cell lines promoted cell migration and invasion. In contrast, KRT8 knockdown suppressed ccRCC metastasis both in vitro and in vivo. KRT8 expression may therefore be a biomarker or potential therapeutic target to identify patients with worse survival. |
| <b>Form</b>             | Lyophilized powder/frozen liquid  |
| <b>Molecular Mass</b>   | 19.15 kDa   |
| <b>Purity</b>           | >90% as determined by SDS-PAGE  |
| <b>Notes</b>            | For research use only.  |
