

D-Lactate Assay Kit

Cat. No. Kit-2463 **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Lactate is generated by lactate dehydrogenase (LDH) under hypoxic or anaerobic conditions. Monitoring lactate levels is, therefore, a good indicator of the balance between tissue oxygen demand and utilization and is useful when studying cellular and animal physiology. D-Lactate is produced in only minor quantities in animals and measuring for D-lactate in animal samples is a means to determine the presence of bacterial infection. Simple, direct and automation-ready procedures for measuring lactate concentration are very desirable. Lactate assay kit is based on lactate dehydrogenase catalyzed oxidation of lactate, in which the formed NADH reduces a probe into a highly fluorescent product. The fluorescence intensity of this product, measured at $\lambda_{ex/em} = 530/585$ nm, is proportional to the lactate concentration in the sample.

Storage -20°C

Shipping On Ice

Size 100 tests

Detection method FL530/585 nm

Compatible Sample Types Serum, plasma, cell culture media etc

Features & Benefits Sensitive and accurate. Detection limit of 1 μ M and linearity up to 50 μ M D-lactate in 96-well plate assay.

 Tel: 1-631-559-9269 1-516-512-3133

 45-1 Ramsey Road, Shirley, NY 11967, USA

Convenient. The procedure involves adding a single working reagent, and reading the fluorescence after 60 min. Room temperature assay.

High-throughput. Can be readily automated as a high-throughput 96-well plate assay for thousands of samples per day.

Assay time	60 min
Sensitivity	1 μ M
