

Human LRP8 Knockdown Cell Lysate

Cat. No. LRP8-231HKCL Lot. No. (See product label)

SPECIFICATION

Product Overview WB-validated LRP8 Knockdown HeLa Cell Lysate

Species Human

Source HeLa

Description

This gene encodes a member of the low density lipoprotein receptor (LDLR) family. Low density lipoprotein receptors are cell surface proteins that play roles in both signal transduction and receptor-mediated endocytosis of specific ligands for lysosomal degradation. The encoded protein plays a critical role in the migration of neurons during development by mediating Reelin signaling, and also functions as a receptor for the cholesterol transport protein apolipoprotein E. Expression of this gene may be a marker for major depressive disorder. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.

Form Cell-Tissue Lysis buffer

Molecular Mass 106 kDa

Notes

Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.

Storage Store at -20 centigrade for two years.
