

Recombinant Full Length Human LRWD1 Protein, GST-tagged

Cat. No. LRWD1-6116HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human LRWD1 full-length ORF (NP_690852.1, 1 a.a. - 647 a.a.) recombinant protein with GST-tag at N-terminal.
Species	Human
Source	In Vitro Cell Free System
Protein Length	647 amino acids
Description	The protein encoded by this gene interacts with components of the origin recognition complex (ORC) and regulates the formation of the prereplicative complex. The encoded protein stabilizes the ORC and therefore aids in DNA replication. This protein is required for the G1/S phase transition of the cell cycle. In addition, the encoded protein binds to trimethylated histone H3 in heterochromatin and recruits the ORC and lysine methyltransferases, which help maintain the repressive heterochromatic state. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2015]
Molecular Mass	97.3 kDa

Applications	Enzyme-linked Immunoabsorbent Assay Western Blot (Recombinant protein) Antibody Production Protein Array
---------------------	---

Notes	Best use within three months from the date of receipt of this protein.
--------------	--

Storage	Store at -80 centigrade. Aliquot to avoid repeated freezing and thawing.
----------------	--

Storage Buffer	50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.
-----------------------	--

GENE INFORMATION

Gene Name	LRWD1 leucine-rich repeats and WD repeat domain containing 1 [Homo sapiens]
------------------	---

Official Symbol	LRWD1
------------------------	-----------------------

Synonyms	LRWD1; leucine-rich repeats and WD repeat domain containing 1; leucine-rich repeat and WD repeat-containing protein 1; CENP 33; centromere protein 33; DKFZp434K1815; ORCA; origin recognition complex associated; ORC-associated protein; origin recognition complex-associated protein; CENP-33;
-----------------	--

Gene ID	222229
