

Recombinant Human MAP2K5 Protein, GST-tagged

Cat. No. MAP2K5-001H Lot. No. (See product label)

SPECIFICATION

Product Overview Recombinant Human MAP2K5 Protein with a GST tag was expressed in insect cells.

Species Human

Source Insect Cells

Description The protein encoded by this gene is a dual specificity protein kinase that belongs to the MAP kinase kinase family. This kinase specifically interacts with and activates MAPK7/ERK5. This kinase itself can be phosphorylated and activated by MAP3K3/MEKK3, as well as by atypical protein kinase C isoforms (aPKCs). The signal cascade mediated by this kinase is involved in growth factor stimulated cell proliferation and muscle cell differentiation. Three alternatively spliced transcript variants of this gene encoding distinct isoforms have been described.

Form Liquid

Molecular Mass 77.0 kDa

Purity 70%-90%

Notes Small volumes of MEK5 recombinant protein vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container's cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
