

Recombinant Human matrix metalloproteinase 13 (collagenase 3), His-tagged

Cat. No. MMP13-443H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	MMP13, 104- 471aa, Human, His tag, E.coli
Species	Human
Source	E.coli
Description	<p>MMP13 of the matrix metalloproteinase (MMP) family is involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP"s are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. The protein encoded by this gene cleaves type II collagen more efficiently than types I and III. It may be involved in articular cartilage turnover and cartilage pathophysiology associated with osteoarthritis. Recombinant human MMP13 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.</p>
