

Recombinant Human Myogenic Differentiation 1

Cat. No. MYOD1-163H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human MYOD1 protein expressed in <i>E.coli</i> encodes full length amino acids and has a molecular mass of 71 kDa.
Species	Human
Source	E.coli
Description	MyoD1 is not detected in normal adult tissue, but is highly expressed in the tumor cell nuclei of rhabdomyosarcomas. Occasionally nuclear expression of MyoD1 is seen in ectomesenchymoma and a subset of Wilm tumors. Weak cytoplasmic staining is observed in several non-muscle tissues, including glandular epithelium and also in rhabdomyosarcomas, neuroblastomas, Ewing sarcomas and alveolar soft part sarcomas.
Formulation	Recombinant Human MYOD1 protein at 100g/ml in 50mM Tris-Acetate, pH7.5, 1mM EDTA and 20% Glycerol.
Application And Suggested Dilutions	•ELISA •Inhibition Assays •Western Blotting
Characterization	On SDS-PAGE comassie blue stained gel, the purified recombinant protein shows a band at 71 kDa.
Storage & Stability	Store vial at -20°C to -80°C. When stored at the recommended temperature, this protein is stable for 12 months.

GENE INFORMATION

Gene Name

MYOD1 myogenic differentiation 1 [Homo sapiens]

Synonyms

MYOD1; myogenic differentiation 1; PUM; MYF3; MYOD; bHLHc1; myogenic factor 3; myoblast determination protein; myoblast determination protein 1; Myf-3; Myogenic factor 3; Myoblast determination protein 1

Gene ID

4654

mRNA Refseq

NM_002478

Protein Refseq

NP_002469

MIM

159970

UniProt ID

P15172

**Chromosome
Location**

11p15

Function

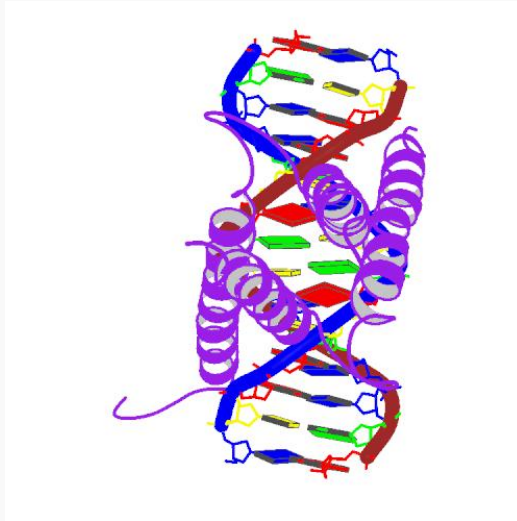

RNA polymerase II transcription factor activity, enhancer binding; transcription coactivator activity; transcription factor binding
