

Recombinant Human Natriuretic Peptides B, aa 1-76

Cat. No. NPPB-2682H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human Natriuretic Peptides B (aa 1-76) is expressed in <i>E. coli</i> .
Species	Human
Source	E.coli
ProteinLength	1-76 a.a.
Description	BNP (Brain natriuretic peptide) is a member of the natriuretic peptide family and encodes a secreted protein which functions as a cardiac hormone. BNP is a 32 amino acid polypeptide and is co-secreted along with a 76 amino acid N-terminal fragment which is biologically inactive. This protein has biological actions including natriuresis, diuresis, vasorelaxation, inhibition of renin and aldosterone secretion. It is thought to play a key role in cardiovascular homeostasis. A high concentration of this protein in the bloodstream is indicative of heart failure.
