

## Recombinant *B. burgdorferi* P27 Protein, MBP-tagged

Cat. No. P27-10B Lot. No. (See product label)

### SPECIFICATION

<b>Product Overview</b>	Recombinant <i>Borrelia burgdorferi</i> Surface Lipoprotein P27 protein produced in <i>E. coli</i> . Protein contains a MBP-tag and is visible on SDS-PAGE at 73.3 kDa for P27-MBP (30.9 kDa for P27 and 42.4 kDa for MBP).
<b>Species</b>	<i>Borrelia burgdorferi</i> B31
<b>Source</b>	<i>E. coli</i>
<b>Description</b>	Surface Lipoprotein P27 is encoded by the spirochete <i>B. burgdorferi</i> , which is carried by Ixodes ticks. Strain B31 is the type strain (ATCC 35210) for this organism and was derived by limited dilutional cloning from the original Lyme-disease tick isolate obtained by A. Barbour. Spirochetal outer surface proteins (Osps) play a major role in both protection from and pathogenesis of Lyme disease. All Osps (OspA to OspF and P27) have been shown to be lipoproteins, containing hydrophobic N-terminal domains and putative cleavage sites (Leu-X-Y-Z-Cys) thought to be recognized by a lipoprotein signal peptidase. The p27 gene is located on a linear plasmid of a size of approximately 55 kb and expressed as a basic protein of 248 amino acids with a typical prokaryotic leader sequence of 17 amino acid residues at the N-terminus of the proposed translation product, as confirmed by Northern and Western blot analysis).
<b>Form</b>	Liquid, 0.2 µm filter sterilised.
<b>Molecular Mass</b>	73.3 kDa for P27-MBP (30.9 kDa for P27 and 42.4 kDa for MBP)

 45-1 Ramsey Road, Shirley, NY 11967, USA

<b>Purity</b>	> 90%
<b>Storage</b>	Short term: +2 to +8 centigrade Long Term: -80 centigrade Can be frozen, but avoid multiple freeze/thaw cycles
<b>Concentration</b>	1.0 mg/mL by UV absorbance at 280 nm
<b>Storage Buffer</b>	0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 and 0.01% (w/v) Sodium Azide.
<b>GENE INFORMATION</b>	
<b>Official Symbol</b>	<i>P27</i>
<b>Synonyms</b>	P27
