## SPECIFICATION

### Product Overview

Alexa Fluor 647 conjugated recombinant human PDGFRA (Gln24-Ala528) protein was fused to His-tag at C-terminus and expressed in human 293 cells (HEK293).

### Species

Human

### Source

HEK293

### ProteinLength

Gln24-Ala528

### Description

PDGFRA(platelet-derived growth factor receptor A), also termed PDGFR $\alpha$ (platelet-derived growth factor receptor  $\alpha$ ), is a receptor located on the surface of a wide range of cell types. This receptor binds to certain isoforms of platelet-derived growth factors (PDGFs) and thereby becomes active in stimulating cell signaling pathways that elicit responses such as cellular growth and differentiation. The receptor is critical for the development of certain tissues and organs during embryogenesis and for the maintenance of these tissues and organs, particularly hematologic tissues, throughout life. Mutations in the gene which codes for PDGFRA, are associated with an array of clinically significant neoplasms.

### Form

Lyophilized

### Molecular Mass

The protein has a calculated MW of 58.4 kDa. The protein migrates as 66-80 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.
