

Recombinant Human PPM1G Protein, Flag-tagged

Cat. No. PPM1G-1353H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human PPM1G Protein (transcript variant 2) is produced by HEK293T expression system. This protein is fused with a Flag tag.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a member of the PP2C family of Ser/Thr protein phosphatases. PP2C family members are known to be negative regulators of cell stress response pathways. This phosphatase is found to be responsible for the dephosphorylation of Pre-mRNA splicing factors, which is important for the formation of functional spliceosome. Studies of a similar gene in mice suggested a role of this phosphatase in regulating cell cycle progression.
Form	PBS buffer
Molecular Mass	59.1 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
