

Human PPM1G Knockdown Cell Lysate

Cat. No. PPM1G-274HKCL Lot. No. (See product label)

SPECIFICATION

Product Overview	WB-validated PPM1G Knockdown HeLa Cell Lysate
Species	Human
Source	HeLa
Description	<p>The protein encoded by this gene is a member of the PP2C family of Ser/Thr protein phosphatases. PP2C family members are known to be negative regulators of cell stress response pathways. This phosphatase is found to be responsible for the dephosphorylation of Pre-mRNA splicing factors, which is important for the formation of functional spliceosome. Studies of a similar gene in mice suggested a role of this phosphatase in regulating cell cycle progression.</p>
Form	Cell-Tissue Lysis buffer
Molecular Mass	59 kDa
Notes	<p>Instruction of use: This knockdown cell lysate should be paired with wild-type HeLa cell lysate for use. For Western blotting, we recommend running wild-type and knockdown lysates on the same gel, and loading each well with equal volume and equal amount of total proteins.</p>
Storage	Store at -20 centigrade for two years.
Concentration	Lot-specific
