SPECIFICATION

Product Overview	Recombinant human RANBP2 protein (aa 2553-2838) with GST tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	2553-2838 a.a.
Description	<p>RAN is a small GTP-binding protein of the RAS superfamily that is associated with the nuclear membrane and is thought to control a variety of cellular functions through its interactions with other proteins. This gene encodes a very large RAN-binding protein that immunolocalizes to the nuclear pore complex. The protein is a giant scaffold and mosaic cyclophilin-related nucleoporin implicated in the Ran-GTPase cycle. The encoded protein directly interacts with the E2 enzyme UBC9 and strongly enhances SUMO1 transfer from UBC9 to the SUMO1 target SP100. These findings place sumoylation at the cytoplasmic filaments of the nuclear pore complex and suggest that, for some substrates, modification and nuclear import are linked events. This gene is partially duplicated in a gene cluster that lies in a hot spot for recombination on chromosome 2q.</p>
Form	Liquid
Bio-activity	The enzyme facilitates in vitro SUMOylation using SUMO-1, SUMO E1, and SUMO E2 UbcH9.
