

Recombinant Full Length Human RPL13 Protein

Cat. No. RPL13-453HF Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human RPL13 with N-terminal proprietary tag. Predicted MW 49.32 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	211 amino acids
Description	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L13E family of ribosomal proteins. It is located in the cytoplasm. This gene is expressed at significantly higher levels in benign breast lesions than in breast carcinomas. Alternatively spliced transcript variants encoding distinct isoforms have been found for this gene. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.
