

Recombinant SARS-CoV-2 S Protein, AVI/His-tagged

Cat. No. S-256S Lot. No. (See product label)

SPECIFICATION

Product Overview Biotinylated 2019-nCoV S Protein RBD-SD1 is produced by our Mammalian expression system and the target gene encoding Arg319-Ser591 is expressed with a Avi, 6His tag at the C-terminus.

Species SARS-CoV-2

Source Human Cells

ProteinLength 319-591 a.a.

Description The spike (S) glycoprotein of coronaviruses is known to be essential in the binding of the virus to the host cell at the advent of the infection process. Most notable is severe acute respiratory syndrome (SARS). The severe acute respiratory syndrome-coronavirus (SARS-CoV) spike (S) glycoprotein alone can mediate the membrane fusion required for virus entry and cell fusion. It is also a major immunogen and a target for entry inhibitors. It's been reported that 2019-nCoV can infect the human respiratory epithelial cells through interaction with the human ACE2 receptor. The spike protein is a large type I transmembrane protein containing two subunits, S1 and S2. S1 mainly contains a receptor binding domain (RBD), which is responsible for recognizing the cell surface receptor. S2 contains basic elements needed for the membrane fusion. The S protein plays key parts in the induction of neutralizing-antibody and T-cell responses, as well as protective immunity.

Form Supplied as a 0.2 uM filtered solution of PBS, PH7.4.

 Tel: 1-631-559-9269 1-516-512-3133

 45-1 Ramsey Road, Shirley, NY 11967, USA

AA Sequence	Arg319-Ser591
Endotoxin	Less than 0.1 ng/ug (1 EU/ug).
Shipping	Dry ice/ice packs

GENE INFORMATION

Gene Name	S surface glycoprotein [Severe acute respiratory syndrome coronavirus 2]
Official Symbol	S
Synonyms	2019-nCov RBD Protein; 2019-nCoV Spike RBD Protein
Gene ID	43740568
Protein Refseq	YP_009724390.1
UniProt ID	P0DTC2
