

Recombinant SARS-CoV(Beijing 02) S(Δ TM) protein

Cat. No. SARSS-101V **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Purified recombinant SARS-CoV(Beijing 02) S(Δ TM) protein was expressed in HEK293 cells.
Species	SARS-CoV
Source	HEK293
Description	<p>Spike protein S1: Attaches the virion to the cell membrane by interacting with host receptor, initiating the infection (By similarity). Binding to human ACE2 and CLEC4M/DC-SIGNR receptors and internalization of the virus into the endosomes of the host cell induces conformational changes in the S glycoprotein. Proteolysis by cathepsin CTSL may unmask the fusion peptide of S2 and activate membranes fusion within endosomes. Spike protein S2: Mediates fusion of the virion and cellular membranes by acting as a class I viral fusion protein. Under the current model, the protein has at least three conformational states: pre-fusion native state, pre-hairpin intermediate state, and post-fusion hairpin state. During viral and target cell membrane fusion, the coiled coil regions (heptad repeats) assume a trimer-of-hairpins structure, positioning the fusion peptide in close proximity to the C-terminal region of the ectodomain. The formation of this structure appears to drive apposition and subsequent fusion of viral and target cell membranes. Spike protein S2': Acts as a viral fusion peptide which is unmasked following S2 cleavage occurring upon virus endocytosis.</p>
Form	Each vial contains 100 ug purified protein (1mg/ml) in PBS (pH7.4).

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Purity	>95%
Applications	WB standard, Ab ELISA, immunogen, etc.
Usage	For research use only, not for use in diagnostic procedures.
Storage	Store at -80 centigrade, Avoid freeze/thaw cycle.
Concentration	1 mg/ml

GENE INFORMATION

Gene Name	S
Official Symbol	S
Synonyms	E2
Gene ID	1489668
Protein Refseq	NP_828851.1
UniProt ID	P59594
