

Recombinant Human SELE Protein, Fc-tagged

Cat. No. SELE-210H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human SELE protein with Fc tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	610
Description	<p>The protein encoded by this gene is found in cytokine-stimulated endothelial cells and is thought to be responsible for the accumulation of blood leukocytes at sites of inflammation by mediating the adhesion of cells to the vascular lining. It exhibits structural features such as the presence of lectin- and EGF-like domains followed by short consensus repeat (SCR) domains that contain 6 conserved cysteine residues. These proteins are part of the selectin family of cell adhesion molecules. Adhesion molecules participate in the interaction between leukocytes and the endothelium and appear to be involved in the pathogenesis of atherosclerosis</p>
