

Recombinant Human SERPINE1 Protein

Cat. No. SERPINE1-5509H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	SERPINE1 was expressed in E. coli, with a molecule weight of 113.0 kDa.
Species	Human
Source	E.coli
Description	<p>SERPINE1 also known as endothelial plasminogen activator inhibitor or serpin E1 is a protein that in humans is encoded by the SERPINE1 gene. SERPINE1 is a serine protease inhibitor (serpin) that functions as the principal inhibitor of tissue plasminogen activator (tPA) and urokinase (uPA), the activators of plasminogen and hence fibrinolysis (the physiological breakdown of bloodclots). It is a serine protease inhibitor (serpin) protein (SERPINE1). The other PAI, plasminogen activator inhibitor-2 (PAI-2) is secreted by the placenta and only present in significant amounts during pregnancy. In addition, protease nexin acts as an inhibitor of tPA and urokinase. PAI-1, however, is the main inhibitor of the plasminogen activators.</p>
