

Recombinant Human SHBG protein, His-tagged

Cat. No. SHBG-3742H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human SHBG was expressed in CHO cells with C-Terminal His-tag + myc-epitope.
Species	Human
Source	CHO
ProteinLength	428 AA
Description	<p>Sex-hormone-binding globulin (SHBG) is a beta-globulin that specifically binds steroid hormones. Its molecular weight is 86 kDa/mol. The major site of SHBG synthesis is thought to be the hepatocytes. Its production is regulated by androgen/estrogen balance, thyroid hormones, insulin and dietary factors, among others. SHBG is involved in the transport of sex steroids in plasma. Its concentration is a major factor regulating their distribution between protein-bound and free states. Determination of SHBG concentration is mainly of importance in the evaluation of mild disorders of androgen metabolism and it allows identification of women with hirsutism who are likely to respond to estrogen therapy. Testosterone/SHBG-ratios correlate well with both measured and calculated values for free testosterone, and help to discriminate between subjects with excessive androgen activity and normal individuals.</p>
Form	Frozen, stabilized and concentrated medium
Molecular Mass	46.79 kDa (calculated); 94kDa (forms a dimer)

Applications

ELISA standard; Standard for Immunoanalytical methods

Notes

This product is intended for research use only.

Storage

Store at -80 centigrade.

GENE INFORMATION

Gene Name

Sex hormone binding globulin [Homo sapiens (human)]

Official Symbol

SHBG

Synonyms

ABP; SBP; TEBG; SHBG, Sex steroid-binding protein; Testisspecific androgen-binding protein; Testosterone-estradiolbinding globulin; Testosterone-estrogen-binding globulin

Gene ID

6462

mRNA Refseq

NM_001040.3

Protein Refseq

NP_001031.2
