

Human Skeletal Muscle Cytoplasmic Lysate

Cat. No. Skeletal Muscle-424H **Lot. No.** (See product label)

SPECIFICATION

Species	Human
Source	Human Skeletal Muscle
Concentration	2 mg/mL or better
Tissue Type	Skeletal Muscle
Shipping	Dry ice
Preparation method	<p>human skeletal muscle tissue cytoplasmic protein lysate was prepared by isolating the cytoplasmic protein from whole tissue homogenates using a proprietary technique. The human skeletal muscle tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The cytoplasmic protein is provided in a buffer including HEPES (pH 7.9), MgCl₂, KCl, EDTA, Sucrose, glycerol, and a cocktail of protease inhibitors. For quality control purposes, the isolated Skeletal Muscle tissue cytoplasmic protein pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated Skeletal Muscle tissue cytoplasmic protein is then Western analyzed by GAPDH antibody, and the expression level is consistent with each lot.</p>
Diagnosis	Normal
Storage Buffer	HEPES pH 7.9, MgCl ₂ , KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.

Storage Instruction

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

Applications

Skeletal Muscle cytoplasmic protein lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
