

Rat Small Intestine Membrane Lysate

Cat. No. Small Intestine-455R Lot. No. (See product label)

SPECIFICATION

Species Rat

Source Rat Small Intestine

Concentration 2 mg/mL or better

Tissue Type Small Intestine

Shipping Dry ice

Preparation method

Rat small intestine tissue membrane protein lysate was prepared by homogenization using a proprietary technique. The tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The rat small intestine tissue membrane is provided in a buffer including HEPES (pH 7.9), MgCl₂, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the small intestine tissue pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated small intestine tissue membrane protein is then Western analyzed by either GAPDH or β -actin antibody, and the expression level is consistent with each lot.

Diagnosis Normal

Storage Buffer HEPES pH 7.9, MgCl₂, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.

Storage Instruction

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

Applications

Small intestine membrane lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
