

## Human Small Intestine Liver Cirrhosis Lysate

Small Intestine-448H Human

Lot. No. (See product label)

### Specification

**Source** Human Small intestine tissue

**Species** Human

**Concentration** 2 mg/mL or better

**Tissue Type** Small intestine

**Shipping** Dry ice

**Preparation method** Human small intestine tissue lysate was prepared by homogenization using a proprietary technique. The tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The human small intestine tissue total protein is provided in a buffer including HEPES (pH7.9), MgCl<sub>2</sub>, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the small intestine tissue pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The small intestine tissue is then Western analyzed by either GAPDH or β-actin antibody, and the expression level is consistent with each lot.

**Diagnosis** Diseased

**Storage Buffer** HEPES pH 7.9, MgCl<sub>2</sub>, KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.

**Storage Instruction** Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

**Applications** Small intestine lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
