

## Human Spleen Membrane Tumor Lysate

Cat. No. Spleen-477H Lot. No. (See product label)

### SPECIFICATION

<b>Species</b>	Human
<b>Source</b>	Human Spleen
<b>Concentration</b>	2 mg/mL or better
<b>Tissue Type</b>	Spleen
<b>Shipping</b>	Dry ice
<b>Preparation method</b>	<p>Human spleen tissue membrane protein lysate was prepared by isolating the membrane protein from whole tissue homogenates using a proprietary technique. The human spleen tissue was frozen in liquid nitrogen immediately after excision and then stored at -70°C. The membrane protein is provided in a buffer including HEPES (pH 7.9), MgCl<sub>2</sub>, KCl, EDTA, Sucrose, Glycerol, sodium deoxycholate, NP-40, and a cocktail of protease inhibitors. For quality control purposes, the isolated spleen tissue membrane protein pattern on SDS-PAGE gel is shown to be consistent for each lot by visualization with coomassie blue staining. The isolated spleen tissue membrane protein is then Western analyzed by either GAPDH or <math>\beta</math>-actin antibody to confirm there is no signal or very weak signal.</p>
<b>Diagnosis</b>	Tumor
<b>Storage Buffer</b>	HEPES pH 7.9, MgCl <sub>2</sub> , KCl, EDTA, Sucrose, Glycerol, Sodium deoxycholate, and NP-40.

**Storage Instruction**

Store at 2-8°C for continuous use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

**Applications**

Spleen membrane protein lysate is for use in Western blotting, 10 µg to 20 µg per lane is recommended for mini gel.
