

Recombinant Human TGM2 protein, His-tagged

Cat. No. TGM2-02H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human TGM2 protein, fused to His-tag, was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-687aa
Description	<p>Transglutaminases are enzymes that catalyze the crosslinking of proteins by epsilon-gamma glutamyl lysine isopeptide bonds. While the primary structure of transglutaminases is not conserved, they all have the same amino acid sequence at their active sites and their activity is calcium-dependent. The protein encoded by this gene acts as a monomer, is induced by retinoic acid, and appears to be involved in apoptosis. Finally, the encoded protein is the autoantigen implicated in celiac disease. Two transcript variants encoding different isoforms have been found for this gene.</p>
Form	Liquid in. Phosphate-Buffered Saline (pH 7.4) containing 10% glycerol, 1mM DTT.
Molecular Mass	79.7 kDa
