

Recombinant Human TNFRSF11B Protein, Fc-tagged

Cat. No. TNFRSF11B-830H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human TNFRSF11B protein with Fc tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	401
Description	<p>The protein encoded by this gene is a member of the TNF-receptor superfamily. This protein is an osteoblast-secreted decoy receptor that functions as a negative regulator of bone resorption. This protein specifically binds to its ligand, osteoprotegerin ligand, both of which are key extracellular regulators of osteoclast development. Studies of the mouse counterpart also suggest that this protein and its ligand play a role in lymph-node organogenesis and vascular calcification. Alternatively spliced transcript variants of this gene have been reported, but their full length nature has not been determined.</p>
