

Recombinant Human TNFSF8 Protein (K169A), His-tagged

Cat. No. TNFSF8-14H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human TNFSF8 Protein (K169A) with a His tag was expressed in HEK293.
Species	Human
Source	HEK293
Description	The protein encoded by this gene is a cytokine that belongs to the tumor necrosis factor (TNF) ligand family. This cytokine is a ligand for TNFRSF8/CD30, which is a cell surface antigen and a marker for Hodgkin lymphoma and related hematologic malignancies. The engagement of this cytokine expressed on B cell surface plays an inhibitory role in modulating Ig class switch. This cytokine was shown to enhance cell proliferation of some lymphoma cell lines, while to induce cell death and reduce cell proliferation of other lymphoma cell lines. The pleiotropic biologic activities of this cytokine on different CD30+ lymphoma cell lines may play a pathophysiologic role in Hodgkin's and some non-Hodgkin's lymphomas. Two transcript variants encoding different isoforms have been found for this gene.
Form	Lyophilized
Molecular Mass	The protein has a calculated MW of 22.3 kDa.
