

Active Native Bovine TSH Protein

Cat. No. TSH-1315B Lot. No. (See product label)

SPECIFICATION

Product Overview	Native bovine thyroid stimulating hormone was purified from bovine pituitary gland.
Species	Bovine
Source	Bovine Pituitary Gland
Description	The four human glycoprotein hormones chorionic gonadotropin (CG), luteinizing hormone (LH), follicle stimulating hormone (FSH), and thyroid stimulating hormone (TSH) are dimers consisting of alpha and beta subunits that are associated noncovalently. The alpha subunits of these hormones are identical, however, their beta chains are unique and confer biological specificity. Thyroid stimulating hormone functions in the control of thyroid structure and metabolism. The protein encoded by this gene is the beta subunit of thyroid stimulating hormone. Mutations in this gene are associated with congenital central and secondary hypothyroidism and Hashimoto's thyroiditis.
Bio-activity	30 IU/mg
Quality Control Test	FSH Contamination: 0.05% LH Contamination: 0.006% GH Contamination: 0.002% PRL Contamination: 0.001%
Storage	Prepare aliquots and store at < -20 centigrade. Avoid freeze/thaw cycles.
