

Recombinant Full Length Human wild-type Tau 2N4R

Cat. No. Tau dGAE-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Tau dGAE Monomers (297-391 aa) without tag was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	297-391 aa
Description	This gene encodes the microtubule-associated protein tau (MAPT) whose transcript undergoes complex, regulated alternative splicing, giving rise to several mRNA species. MAPT transcripts are differentially expressed in the nervous system, depending on stage of neuronal maturation and neuron type. MAPT gene mutations have been associated with several neurodegenerative disorders such as Alzheimer's disease, Pick's disease, frontotemporal dementia, cortico-basal degeneration and progressive supranuclear palsy.
