

Recombinant Human UBB Protein, GST-6His-tagged

Cat. No. UBB-613H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human UBB fused with N-terminal GST-6His was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	1-229 aa
Description	<p>This gene encodes ubiquitin, one of the most conserved proteins known. Ubiquitin has a major role in targeting cellular proteins for degradation by the 26S proteasome. It is also involved in the maintenance of chromatin structure, the regulation of gene expression, and the stress response. Ubiquitin is synthesized as a precursor protein consisting of either polyubiquitin chains or a single ubiquitin moiety fused to an unrelated protein. This gene consists of three direct repeats of the ubiquitin coding sequence with no spacer sequence. Consequently, the protein is expressed as a polyubiquitin precursor with a final amino acid after the last repeat. An aberrant form of this protein has been detected in patients with Alzheimer's disease and Down syndrome. Pseudogenes of this gene are located on chromosomes 1, 2, 13, and 17. Alternative splicing results in multiple transcript variants.</p>
Form	Lyophilized from a 0.2 M filtered solution of PBS, pH 7.4.
Molecular Mass	40.9kD
AA Sequence	MSPILGYWKIKGLVQPTRLLEYLEEKYEEHLYERDEGDKWRNKKFELGLEFPNLPY

Endotoxin Endotoxin level is <0.1 ng/g of protein (<1EU/g).

Purity >95% as determined by SDS-PAGE and Coomassie blue staining

Concentration Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100 g/ml. Dissolve the lyophilized protein in 1X PBS. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

GENE INFORMATION

Gene Name [UBB ubiquitin B \[Homo sapiens \]](#)

Official Symbol [UBB](#)

Synonyms UBB; ubiquitin B; polyubiquitin-B; FLJ25987; MGC8385; polyubiquitin B; UBC; UBA52; RPS27A;

Gene ID [7314](#)

mRNA Refseq [NM_018955](#)

Protein Refseq [NP_061828](#)

MIM [191339](#)
