

Recombinant Human SHC1, His-tagged

Cat. No. SHC1-30065TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment from Human SHC1 (aa 1-474) with N terminal His-tag; 494aa (53.8 kDa), inclusive of tag.
Species	Human
Source	E.coli
ProteinLength	474 amino acids
Description	This gene encodes three main isoforms that differ in activities and subcellular location. While all three are adapter proteins in signal transduction pathways, the longest (p66Shc) may be involved in regulating life span and the effects of reactive oxygen species. The other two isoforms, p52Shc and p46Shc, link activated receptor tyrosine kinases to the Ras pathway by recruitment of the GRB2/SOS complex. p66Shc is not involved in Ras activation. Unlike the other two isoforms, p46Shc is targeted to the mitochondrial matrix. Several transcript variants encoding different isoforms have been found for this gene.
Conjugation	HIS
Molecular Weight	53.800kDa inclusive of tags
Tissue specificity	Widely expressed. Expressed in neural stem cells but absent in mature neurons.
Form	Liquid
