

Recombinant Human SKP1

Cat. No. SKP1-31409TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Skp1 isoform 2 , predicted MWt 18kDa.
Species	Human
Source	E.coli
ProteinLength	160 amino acids
Description	This gene encodes a component of SCF complexes, which are composed of this protein, cullin 1, a ring-box protein, and one member of the F-box family of proteins. This protein binds directly to the F-box motif found in F-box proteins. SCF complexes are involved in the regulated ubiquitination of specific protein substrates, which targets them for degradation by the proteasome. Specific F-box proteins recognize different target protein(s), and many specific SCF substrates have been identified including regulators of cell cycle progression and development. Studies have also characterized the protein as an RNA polymerase II elongation factor. Alternative splicing of this gene results in two transcript variants. A related pseudogene has been identified on chromosome 7.
