

Recombinant Human SMARCA4

Cat. No. SMARCA4-27676TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human BRG1 expressed in a baculovirus system; amino acids 1-1647, 185kDa.
Species	Human
ProteinLength	1-1647 a.a.
Description	The protein encoded by this gene is a member of the SWI/SNF family of proteins and is similar to the brahma protein of Drosophila. Members of this family have helicase and ATPase activities and are thought to regulate transcription of certain genes by altering the chromatin structure around those genes. The encoded protein is part of the large ATP-dependent chromatin remodeling complex SNF/SWI, which is required for transcriptional activation of genes normally repressed by chromatin. In addition, this protein can bind BRCA1, as well as regulate the expression of the tumorigenic protein CD44. Multiple transcript variants encoding different isoforms have been found for this gene.
Tissue specificity	Colocalizes with ZEB1 in E-cadherin-negative cells from established lines, and stroma of normal colon as well as in de-differentiated epithelial cells at the invasion front of colorectal carcinomas (at protein level).
Biological activity	SMARCA4-27676TH contains no detectable proteases, DNase and RNase activity.
