

Active Recombinant Human superoxide dismutase 2 Protein, His tagged

Cat. No. SOD2-30343TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active recombinant human SOD2 protein was expressed in E. coli and purified by using conventional chromatography techniques.
Species	Human
Source	E.coli
ProteinLength	25-222 aa
Description	This gene is a member of the iron/manganese superoxide dismutase family. It encodes a mitochondrial protein that forms a homotetramer and binds one manganese ion per subunit. This protein binds to the superoxide byproducts of oxidative phosphorylation and converts them to hydrogen peroxide and diatomic oxygen. Mutations in this gene have been associated with idiopathic cardiomyopathy (IDC), premature aging, sporadic motor neuron disease, and cancer. Alternative splicing of this gene results in multiple transcript variants. A related pseudogene has been identified on chromosome 1.
Form	Liquid
Molecular Mass	24.4 kDa (219aa) confirmed by MALDI-TOF
