

Recombinant Human SP100

Cat. No. SP100-30989TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human SP100 with N terminal proprietary tag, 36.41kDa.
Species	Human
Source	Wheat Germ
ProteinLength	98 amino acids
Description	This gene encodes a subnuclear organelle and major component of the PML (promyelocytic leukemia)-SP100 nuclear bodies. PML and SP100 are covalently modified by the SUMO-1 modifier, which is considered crucial to nuclear body interactions. The encoded protein binds heterochromatin proteins and is thought to play a role in tumorigenesis, immunity, and gene regulation. Alternatively spliced variants have been identified for this gene; one of which encodes a high-mobility group protein.
Molecular Weight	36.410kDa inclusive of tags
Tissue specificity	Widely expressed. Sp100-B is expressed only in spleen, tonsil, thymus, mature B-cell line and some T-cell line, but not in brain, liver, muscle or non-lymphoid cell lines.
Form	Liquid
Purity	Proprietary Purification
