

Active Recombinant Human SPHK2, His-tagged

Cat. No. SPHK2-30668TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Full length recombinant human SPHK2 with N-terminal His tag.
Species	Human
Description	This gene encodes one of two sphingosine kinase isozymes that catalyze the phosphorylation of sphingosine into sphingosine 1-phosphate. Sphingosine 1-phosphate mediates many cellular processes including migration, proliferation and apoptosis, and also plays a role in several types of cancer by promoting angiogenesis and tumorigenesis. The encoded protein may play a role in breast cancer proliferation and chemoresistance. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
Conjugation	HIS
