

Recombinant Human HIST1H2AA Protein, HIS-tagged

Cat. No. HIST1H2AA-115H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human HIST1H2AA fused with His tag at N-terminal was expressed in E. coli.
Species	Human
Source	E.coli
Description	Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H2A family. Transcripts from this gene contain a palindromic termination element.
Form	25mM Tris, pH8.0, 150 mM NaCl, 10% glycerol, 1 % Sarkosyl. Store at -80 centigrade. Avoid repeated freeze-thaw cycles. Stable for at least 3 months from receipt of products under proper storage and handling conditions.
Molecular Mass	14.1 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Concentration	>50 ug/mL as determined by microplate BCA method

GENE INFORMATION

Gene Name	HIST1H2AA histone cluster 1, H2aa [Homo sapiens]
Official Symbol	HIST1H2AA
Synonyms	HIST1H2AA; histone cluster 1, H2aa; H2A histone family, member R , histone 1, H2aa; histone H2A type 1-A; bA317E16.2; H2AFR; histone H2A/r; histone 1, H2aa; H2A histone family, member R; H2AA;
Gene ID	221613
mRNA Refseq	NM_170745
Protein Refseq	NP_734466
MIM	613499
UniProt ID	Q96QV6
