

Recombinant Human CCR2 Protein

Cat. No. CCR2-135H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CCR2 was expressed in Wheat Germ. Liposomes.
Species	Human
Source	Wheat Germ
Description	This gene encodes two isoforms of a receptor for monocyte chemoattractant protein-1, a chemokine which specifically mediates monocyte chemotaxis. Monocyte chemoattractant protein-1 is involved in monocyte infiltration in inflammatory diseases such as rheumatoid arthritis as well as in the inflammatory response against tumors. The receptors encoded by this gene mediate agonist-dependent calcium mobilization and inhibition of adenylyl cyclase. This gene is located in the chemokine receptor gene cluster region. Two alternatively spliced transcript variants are expressed by the gene.
Form	25 mM Tris-HCl of pH8.0 containing 2% glycerol.
Molecular Mass	41.2 kDa
