

Recombinant Human GLUL Protein, His-tagged

Cat. No. GLUL-153H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human GLUL(Thr2-Asn373), transcript variant 1, fused with His tag at C-terminal was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	Thr2-Asn373
Description	The protein encoded by this gene belongs to the glutamine synthetase family. It catalyzes the synthesis of glutamine from glutamate and ammonia in an ATP-dependent reaction. This protein plays a role in ammonia and glutamate detoxification, acid-base homeostasis, cell signaling, and cell proliferation. Glutamine is an abundant amino acid, and is important to the biosynthesis of several amino acids, pyrimidines, and purines. Mutations in this gene are associated with congenital glutamine deficiency, and overexpression of this gene was observed in some primary liver cancer samples. There are six pseudogenes of this gene found on chromosomes 2, 5, 9, 11, and 12. Alternative splicing results in multiple transcript variants.
Form	Supplied as a 0.2 μ M filtered solution of 20mM Tris-HCl, 200mM NaCl, 50mM Imidazole, pH 8.0
Molecular Mass	43.0 kDa
Endotoxin	< 0.1 EU per μ g protein as determined by LAL test
