

Recombinant Human SULT2B1

Cat. No. SULT2B1-30916TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human SULT2B1 , 41.3 kDa.
Species	Human
Source	E.coli
ProteinLength	356 amino acids
Description	Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones, neurotransmitters, drugs, and xenobiotic compounds. These cytosolic enzymes are different in their tissue distributions and substrate specificities. The gene structure (number and length of exons) is similar among family members. This gene sulfates dehydroepiandrosterone but not 4-nitrophenol, a typical substrate for the phenol and estrogen sulfotransferase subfamilies. Two alternatively spliced variants that encode different isoforms have been described.
Molecular Weight	41.300kDa
Tissue specificity	Expressed highly in placenta, prostate and trachea and lower expression in the small intestine and lung.
Form	Liquid
Purity	by SDS-PAGE
