

# Recombinant Human WARS Protein, His-tagged

**Cat. No.** WARS-164H    **Lot. No.** (See product label)

## SPECIFICATION

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Description</b>      | <p>Aminoacyl-tRNA synthetases catalyze the aminoacylation of tRNA by their cognate amino acid. Because of their central role in linking amino acids with nucleotide triplets contained in tRNAs, aminoacyl-tRNA synthetases are thought to be among the first proteins that appeared in evolution. Two forms of tryptophanyl-tRNA synthetase exist, a cytoplasmic form, named WARS, and a mitochondrial form, named WARS2.</p> <p>Tryptophanyl-tRNA synthetase (WARS) catalyzes the aminoacylation of tRNA(trp) with tryptophan and is induced by interferon. Tryptophanyl-tRNA synthetase belongs to the class I tRNA synthetase family. Four transcript variants encoding two different isoforms have been found for this gene.</p> |
| <b>Form</b>             | Supplied as a 0.2 µ filtered solution of 20mM TrisHCl, 1mM DTT, 100mM NaCl, 1mM DTT, 10% Glycerol, pH8.0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**Endotoxin** Endotoxin level is <0.1 ng/g of protein (<1EU/g).

**Purity** >95% as determined by SDS-PAGE and Coomassie blue staining

## GENE INFORMATION

**Gene Name** WARS tryptophanyl-tRNA synthetase [ Homo sapiens ]

**Official Symbol** WARS

**Synonyms** WARS; tryptophanyl-tRNA synthetase; IFI53; tryptophan--tRNA ligase, cytoplasmic; IFP53; tryptophan tRNA ligase 1; cytoplasmic; hWRS; trpRS; interferon-induced protein 53; tryptophan tRNA ligase 1, cytoplasmic; GAMMA-2;

**Gene ID** 7453

**mRNA Refseq** NM\_004184

**Protein Refseq** NP\_004175

**MIM** 191050

**UniProt ID** P23381
