

Recombinant Human IL1RAP Protein, His-tagged

Cat. No. IL1RAP-215H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human IL1RAP, transcript variant 2, fused with His tag at C-terminal was expressed in HEK293.
Species	Human
Source	HEK293
Description	Interleukin 1 induces synthesis of acute phase and proinflammatory proteins during infection, tissue damage, or stress, by forming a complex at the cell membrane with an interleukin 1 receptor and an accessory protein. This gene encodes the interleukin 1 receptor accessory protein. The protein is a necessary part of the interleukin 1 receptor complex which initiates signalling events that result in the activation of interleukin 1-responsive genes. Alternative splicing of this gene results in two transcript variants encoding two different isoforms, one membrane-bound and one soluble. The ratio of soluble to membrane-bound forms increases during acute-phase induction or stress.
Form	Lyophilized from a 0.2 M filtered solution of 20mM PB, 150mM NaCl, pH 7.2
Molecular Mass	39.75kD
