

Recombinant Human TALDO1, His-tagged

Cat. No. TALDO1-31154TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Transaldolase 1 with an N terminal His tag; 357 amino acids including tag, predicted MWt 39.7kDa. (
Species	Human
Source	E.coli
ProteinLength	337 amino acids
Description	Transaldolase 1 is a key enzyme of the nonoxidative pentose phosphate pathway providing ribose-5-phosphate for nucleic acid synthesis and NADPH for lipid biosynthesis. This pathway can also maintain glutathione at a reduced state and thus protect sulfhydryl groups and cellular integrity from oxygen radicals. The functional gene of transaldolase 1 is located on chromosome 11 and a pseudogene is identified on chromosome 1 but there are conflicting map locations. The second and third exon of this gene were developed by insertion of a retrotransposable element. This gene is thought to be involved in multiple sclerosis.
Conjugation	HIS
Molecular Weight	39.700kDa inclusive of tags
