

Recombinant Human RYK Protein, DDK/His-tagged

Cat. No. RYK-694H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human RYK(Pro26-Arg224) , transcript variant 1, fused with DDK/His tag at C-terminal was expressed in HEK293 cells.
Species	Human
Source	HEK293
ProteinLength	26-224 a.a.
Description	The protein encoded by this gene is an atypical member of the family of growth factor receptor protein tyrosine kinases, differing from other members at a number of conserved residues in the activation and nucleotide binding domains. This gene product belongs to a subfamily whose members do not appear to be regulated by phosphorylation in the activation segment. It has been suggested that mediation of biological activity by recruitment of a signaling-competent auxiliary protein may occur through an as yet uncharacterized mechanism. The encoded protein has a leucine-rich extracellular domain with a WIF-type Wnt binding region, a single transmembrane domain, and an intracellular tyrosine kinase domain. This protein is involved in stimulating Wnt signaling pathways such as the regulation of axon pathfinding. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
Form	1 x PBS, pH7.4, 10% glycerol.
Molecular Mass	25 kDa
