

Recombinant Human TP73

Cat. No. TP73-30579TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human p73 beta with N terminal proprietary tag; MWt 88 kDa.
Species	Human
Source	Sf9 Cells
ProteinLength	499 amino acids
Description	This gene encodes a member of the p53 family of transcription factors involved in cellular responses to stress and development. It maps to a region on chromosome 1p36 that is frequently deleted in neuroblastoma and other tumors, and thought to contain multiple tumor suppressor genes. The demonstration that this gene is monoallelically expressed (likely from the maternal allele), supports the notion that it is a candidate gene for neuroblastoma. Many transcript variants resulting from alternative splicing and/or use of alternate promoters have been found for this gene, but the biological validity and the full-length nature of some variants have not been determined.
