

Recombinant Human CD274 Protein, DDK-tagged

Cat. No. CD274-173H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CD274 Protein transcript variant 1 (19-238aa, Met-Phe start), was expressed in Insect cells with C-terminal DDK tag.
Species	Human
Source	Insect Cells
ProteinLength	19-238 aa
Description	This gene encodes an immune inhibitory receptor ligand that is expressed by hematopoietic and non-hematopoietic cells, such as T cells and B cells and various types of tumor cells. The encoded protein is a type I transmembrane protein that has immunoglobulin V-like and C-like domains. Interaction of this ligand with its receptor inhibits T-cell activation and cytokine production. During infection or inflammation of normal tissue, this interaction is important for preventing autoimmunity by maintaining homeostasis of the immune response. In tumor microenvironments, this interaction provides an immune escape for tumor cells through cytotoxic T-cell inactivation. Expression of this gene in tumor cells is considered to be prognostic in many types of human malignancies, including colon cancer and renal cell carcinoma. Alternative splicing results in multiple transcript variants.
Form	50mM Tris-HCl, pH8.0, 100mM glycine, 10% glycerol.
