

Recombinant Human TRIM23

Cat. No. TRIM23-30124TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human TRIM23 with N terminal proprietary tag, 89.25 kDa.
Species	Human
Source	Wheat Germ
ProteinLength	574 amino acids
Description	The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. This protein is also a member of the ADP ribosylation factor family of guanine nucleotide-binding family of proteins. Its carboxy terminus contains an ADP-ribosylation factor domain and a guanine nucleotide binding site, while the amino terminus contains a GTPase activating protein domain which acts on the guanine nucleotide binding site. The protein localizes to lysosomes and the Golgi apparatus. It plays a role in the formation of intracellular transport vesicles, their movement from one compartment to another, and phospholipase D activation. Three alternatively spliced transcript variants for this gene have been described.
Molecular Weight	89.250kDa inclusive of tags
Form	Liquid
Purity	Proprietary Purification
